GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Federal Delisted NPL site list

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly known as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Date of Government Version: 06/21/2016

NON HSI: Non-Hazardous Site Inventory

This list was obtained by EDR in 1998 and contains property listings that have reported contamination of soil or groundwater under the Georgia Hazardous Site Response Act (HSRA). These sites were not placed on the Georgia Priority list (Hazardous Site Inventory or HSI) because their hazard evaluation scores did not exceed the threshold levels established for sites posing an imminent threat to health or the environment. Disclaimer provided by Rindt-McDuff Associates - the database information has been obtained from publicly available sources produced by other entities. While reasonable steps have been taken to insure the accuracy of the data, RMA does not guarantee the accuracy of the data. No claim is made for the actual existence of pollution at any site. This data does not constitute a legal opinion.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historic Gas Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data

Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principal investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General NE

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

<u>MAP ID</u>	<u>LOCATION</u> <u>FROM TP</u>	<u>GENERAL DIRECTION</u> <u>GROUNDWATER FLOW</u>
Not Reported		

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: Urban land

Soil Surface Texture:
Hydrologic Group: Not reported

Soil Drainage Class:
Hydric Status: Unknown

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

No Layer Information available.

Soil Map ID: 2

Soil Component Name: Water

Soil Surface Texture:
Hydrologic Group: Not reported

Soil Drainage Class:
Hydric Status: Unknown

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

No Layer Information available.

Soil Map ID: 3

Soil Component Name: Congaree

Soil Surface Texture: loam

Hydrologic Group: Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.

Soil Drainage Class: Well drained

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Moderate

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 99 inches

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.

Source: FEMA

Telephone: 877-336-2627

Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Wetlands Inventory

Telephone: 706-542-1581

HYDROGEOLOGIC INFORMATION

AQUIFLOW^R Information System

Source: EDR proprietary database of groundwater flow information

EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit

Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)

This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

STATE RECORDS

Georgia Public Supply Wells

USGS Georgia Water Wells

Source: USGS, Georgia District Office

Telephone: 770-903-9100

DNR Managed Lands

Source: Department of Natural Resources

Telephone: 706-557-3032

This dataset provides 1:24,000-scale data depicting boundaries of land parcels making up the public lands managed by the Georgia Department of Natural Resources (GDNR). It includes polygon representations of State Parks, State Historic Parks, State Conservation Parks, State Historic Sites, Wildlife Management Areas, Public Fishing Areas, Fish Hatcheries, Natural Areas and other specially-designated areas. The data were collected and located by the Georgia Department of Natural Resources. Boundaries were digitized from survey plats or other information.

OTHER STATE DATABASE INFORMATION

RADON

Area Radon Information

Source: USGS

Telephone: 703-356-4020

The National Radon Database has been developed by the U.S. Environmental Protection Agency (USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at private sources such as universities and research institutions.

EPA Radon Zones

Source: EPA

Telephone: 703-356-4020

Sections 307 & 309 of IRRA directed EPA to list and identify areas of U.S. with the potential for elevated indoor radon levels.

OTHER

Airport Landing Facilities: Private and public use landing facilities

Source: Federal Aviation Administration, 800-457-6656

Epicenters: World earthquake epicenters, Richter 5 or greater

Source: Department of Commerce, National Oceanic and Atmospheric Administration

Earthquake Fault Lines: The fault lines displayed on EDR's Topographic map are digitized quaternary faultlines, prepared in 1975 by the United State Geological Survey

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Resolute Environmental and Water Resources Consult were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

I. PLAN CERTIFICATION:

A. Registered Professional Engineer or Professional Geologist Certification

I hereby certify that I have directed and supervised the fieldwork and preparation of this plan, in accordance with State Rules and Regulations. As a registered professional geologist and/or professional engineer, I certify that I am a qualified groundwater professional, as defined by the Georgia State Board of Professional Geologists. All of the information and laboratory data in this plan and in all of the attachments are true, accurate, complete, and in accordance with applicable State Rules and Regulations.

Name: Jason A. Cooper, P.E.

Signature: 

Date: 10-14-02

II. PROJECT SUMMARY

(Appendix I, Figure 1a and 1b: Site Location Map)

Provide a brief description or explanation of the site and a brief chronology of environmental events leading up to this report. PLEASE NOTE THAT THIS SUMMARY MUST INCLUDE, AT A MINIMUM THE FOLLOWING:

The results of the Site Investigation;

The corrective action objectives;

The monitoring plan and activities to meet the corrective action objectives.

In 2002, GEC supervised the closure of the UST system located at the site. Through the sampling that accompanied the closure activities, a release was discovered. The CAP-A was submitted for the site in July 2002. After several monitoring well installation events, the contamination was delineated and the CAP-B was submitted in March 2005. EPD approval of the CAP-B was received in April 2006 and the remediation system was ordered. GEC verified the groundwater model, which resulted in the following corrective action objectives:

Groundwater: 3,500 ug/L benzene.

In February 2007, a soil vapor extraction and air sparge system was installed at the site, with full-scale operation beginning on February 26, 2007. Quarterly sampling was proposed for the time in which the remediation system is operational. Following the February 2009 monitoring event, the remediation system was adjusted to focus efforts in the area of MW-3, which is the only location that has exceeded the ACL during the past three monitoring events.

The recommendation of the previous submittal was to shut down the remediation system in order to observe the rebound effect of the contamination at the site. This recommendation was approved by the June 30, 2010 EPD Notice to Continue letter.

On October 19, 2010, a groundwater sampling event was conducted. This report includes the results of this event. The next sampling event is scheduled for April 2011.

III. ACTIVITIES AND ASSESSMENT OF EXISTING CONDITIONS

A. Potentiometric Data:

Tabulate all data and illustrate last 2 monitoring events findings in Figures 2a and 2b.

(Appendix I, Figure 2a, 2b: Potentiometric Surface Maps)

(Appendix II, Table 1: Groundwater Elevations)

Discuss groundwater flow at this site and implications for this project.

Water table measurements of the monitoring well network were gauged with an oil/water inter-face probe during groundwater monitoring activities on October 19, 2010. The remediation system was shut down on July 2, 2010. No free product was detected in any monitoring or recovery wells gauged. Free product has never been detected at the site.

The site-specific groundwater flow direction is to the east-northeast. However, there are two distinct hydraulic gradient zones across the site. The southwest section of the property has a much greater hydraulic gradient than the rest of the property. This is illustrated by comparing two equidistant hydraulic gradients. The first gradient is from MW-1 to MW-6, approximately 115 feet in linear distance. In this distance there is a

groundwater elevation drop of 11.59 feet, resulting in a hydraulic gradient of 0.10 ft/ft. The next gradient is from MW-7 to MW-12, also approximately 115 feet in linear distance and has a hydraulic gradient of 0.02 ft/ft.

As can be seen in Table 1, the site groundwater table elevation has experienced a seasonal decrease. Of the eleven wells gauged, all exhibited decreased groundwater levels since the January 2010 monitoring event. The average decrease of the groundwater table in the monitoring well system was 3.14 feet.

B. Analytical Data:

Tabulate all data for monitoring event findings in Table 2, illustrate last two events findings in Figures 3a and 3b, and graph the trend of contaminant concentrations in Figure 4.

(Appendix I, Figure 3a through 4b: Groundwater Quality Maps)

(Appendix II, Table 2: Groundwater Analysis Results)

(Appendix III: Laboratory Analysis Results)

Discuss groundwater analysis results, trend of contaminant concentrations, and implications for this project.

Figures 3A-3B, Figures 4A-4D, and Figures 5A-5B show the differences between groundwater quality maps, charts, and the benzene isoconcentration maps for the January 23, 2010 and the October 19, 2010 sampling events. For this sampling event, GEC was able to sample thirteen monitoring wells, two other wells (MW-13 and MWR-14) were either dry at the time of water level measurements or did not recharge sufficiently for sampling.

As mentioned previously, the last submittal suggested that the remediation system be shut down to observe the site for any rebound of contamination concentrations. At the time of this sampling event the system had been shut down for 97 days. During the January 2010 sampling event only one well, MW-17, was only slightly above the ACL at 3,700 ug/l for benzene. For the most recent event, October 2010, MW-17 had a benzene concentration of 2,500 ug/l.

Of the remaining ten wells sampled, all but two wells, MW-11 and MW-15, had increases in contamination levels. The wells with the largest increases were MW-2 and MW-3. MW-2's benzene concentration increased from 96 ug/l to 4,500 ug/l, while MW-3 increased from 390 ug/l to 3,100 ug/l. The remaining six wells also had incremental increases in all BTEX constituents. It should also be pointed out that none of the increases are above the historical highest level.

Although there were increases of BTEX concentrations at the site, only one monitoring well, MW-2, is above the ACL for benzene during this sampling event. The concentrations for toluene, ethylbenzene and xylenes all remain below the instream limits in all monitoring wells.

Since the last submitted report approximately 750 gallons of groundwater has been removed and stored on the on-site 550-gallon holding tank until disposed of by Greenleaf Treatment Services, LLC. Copies of the disposal manifests are located in Appendix V.

IV. SITE RANKING (*Note: re-rank site after each monitoring event*)
(*Appendix IV: Site ranking results*)

Environmental Site Sensitivity Score: 2,000

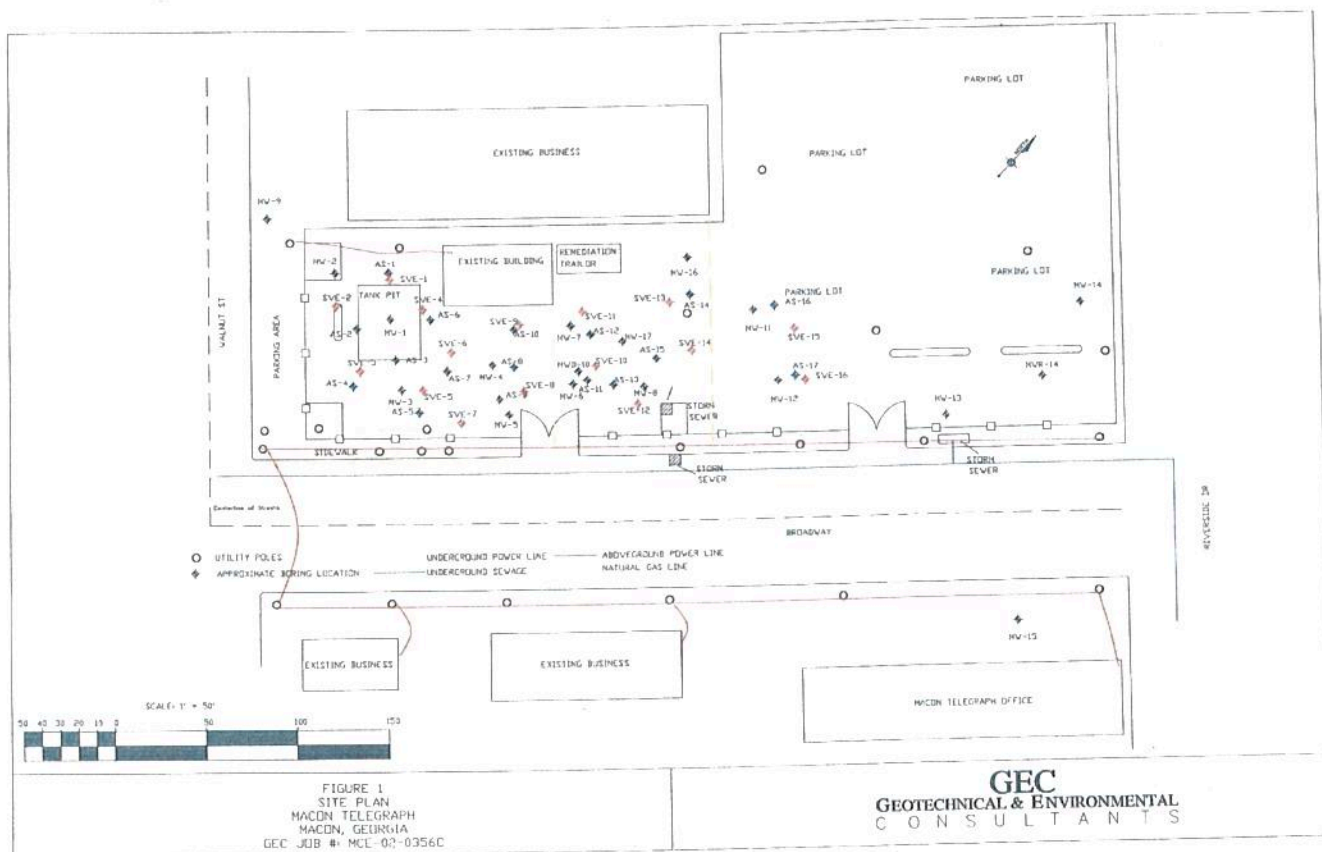

V. CONCLUSIONS/RECOMMENDATIONS

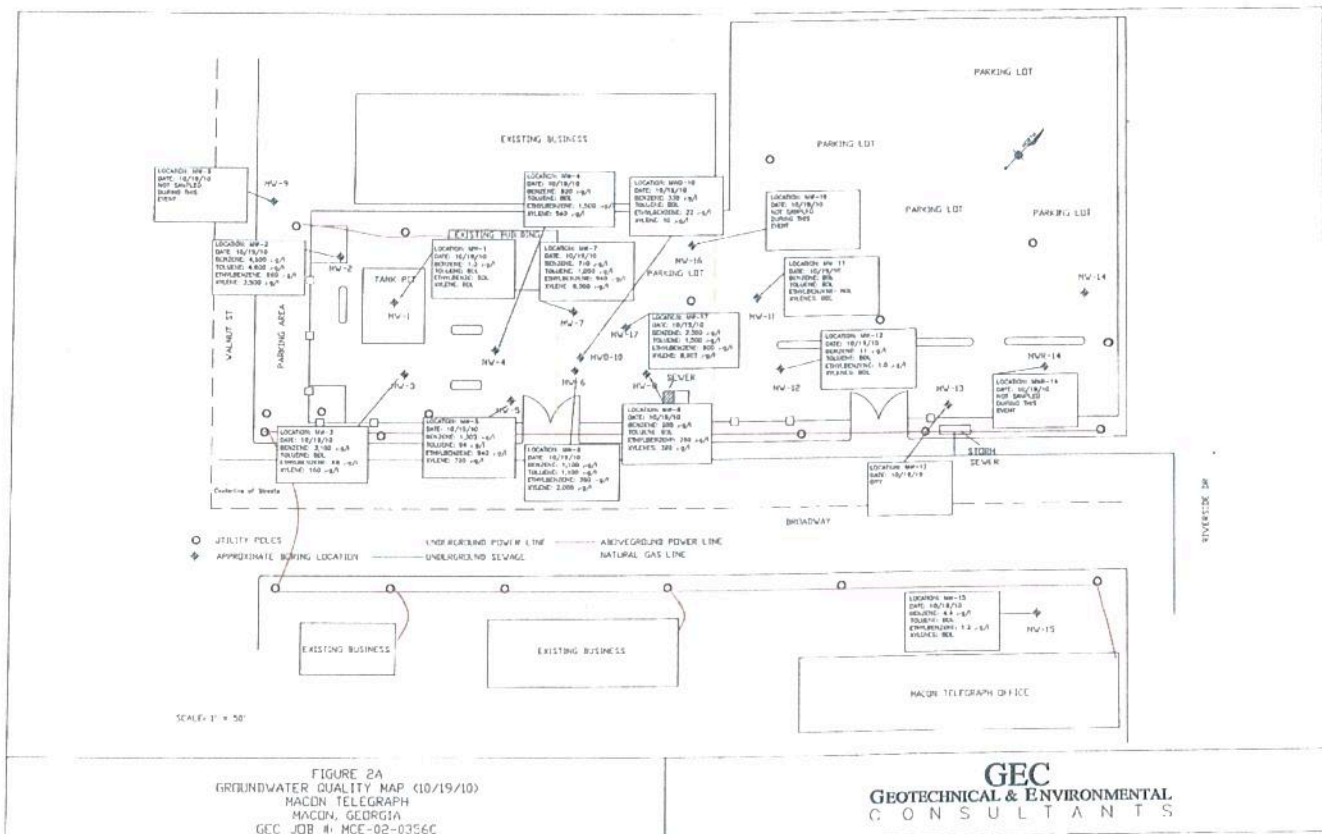

Provide justification of no-further-action-required recommendation or briefly discuss future monitoring plans for this site.

The remediation system was shut down for over 90 days prior to the October 2010 sampling event. As expected, there was a rebounding increase in the contamination levels at the site. Even with the increases, the site ranking score remained 2,000, due to the benzene levels at the site remaining below 5,000 ug/l. Of the ten monitoring wells that, at some point during the project, have had benzene concentrations over the remediation goal, 3,500 ug/l, currently only one well, MW-2, remains slightly above that goal.

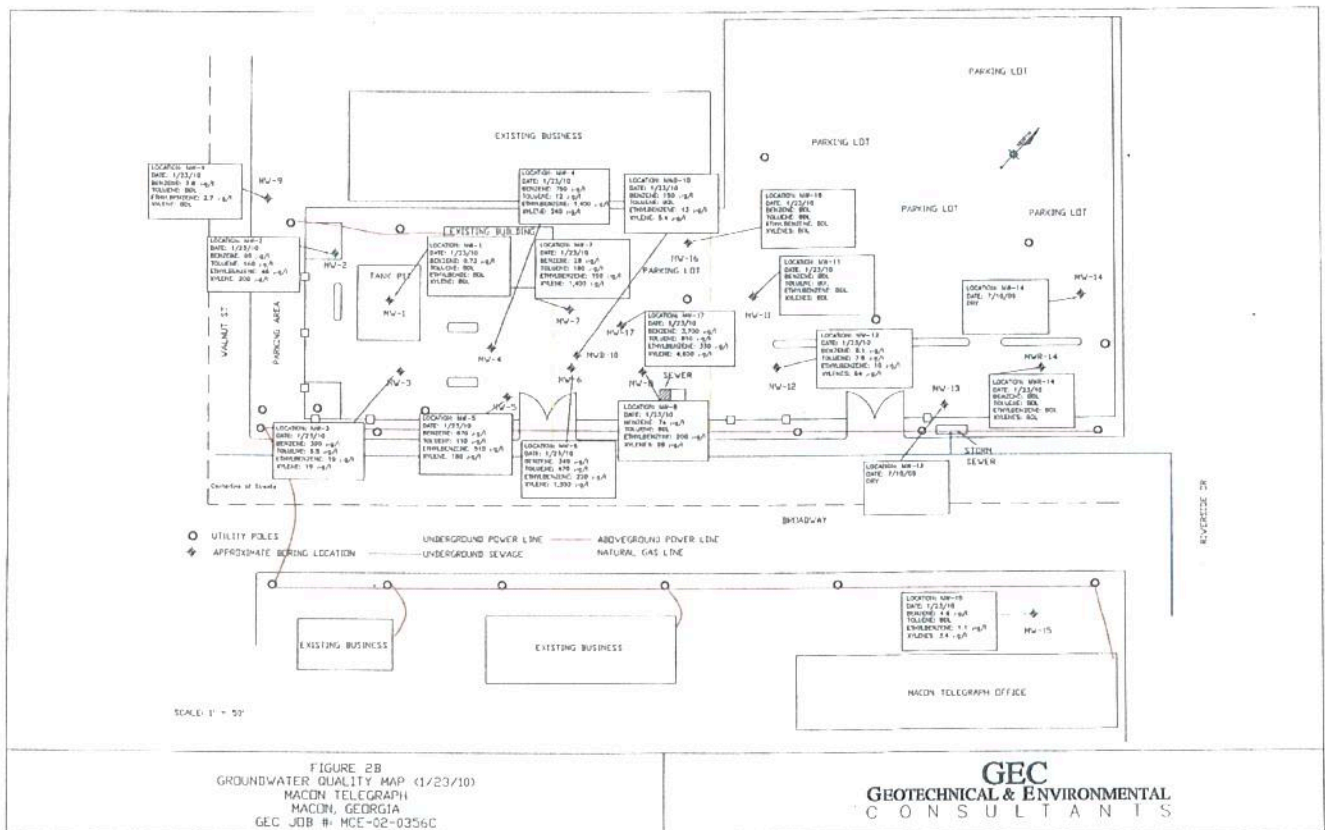

GEC recommends leaving the remediation system shut down at the site, but not removing the system, then perform another sampling event in April 2011 to see where the contamination levels will equilibrate. During the next event, GEC recommends adding MW-9 back to the sampling schedule, due to the increases noted in MW-2, which is the closest well to MW-9.

Report Summary

Monday October 25, 2010

Report Number: L485096

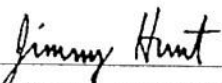

Samples Received: 10/21/10

Client Project: 090265.210

Description: The Telegraph

The analytical results in this report are based upon information supplied by you, the client, and are for your exclusive use. If you have any questions regarding this data package, please do not hesitate to call.

Entire Report Reviewed By:

Jimmy Hunt, ESC Representative

APPENDIX IV

GEC

Facility ID: 04110030

County: Bibb

Ranked By: Jason A. Cooper, P.E.

Date Ranked: November 13, 2010

SITE RANKING FORM

SOIL CONTAMINATION

A. Total Regulated PAHs – Maximum Concentration at the site (Assume < 0.660 mg/kg if only gasoline was stored on site)

 ≤ 0.0660 = 0

 0.066-0.99 mg/kg = 10

 1-10 mg/kg = 25

X > 10 mg/kg = 50

B. Total Benzene – Maximum Concentration found on the site

 ≤ 0.005 mg/kg = 0

 > 0.005 – 0.05 mg/kg = 1

 0.05 – 0.99 = 10

X 1 – 9.9 mg/kg = 25

 10 – 49.9 mg/kg = 40

 ≥ 50 mg/kg = 50

C. DEPTHS TO GROUNDWATER – (Shallowest)
(bls = below land surface)

 > 50' bls = 1

 > 25' bls = 2

 > 10' bls = 3

X ≤ 10' bls = 10

Fill in the blanks: (A. 50 + B. 25) x C. 10 = D. 750

GROUNDWATER CONTAMINATION

E. Free Product (Non-aqueous-phase Liquid hydrocarbons: See Guidelines for definition of "sheen").

X No free product = 0

 Sheen – 1/8" = 250

 > 1/8" – 6" = 500

 > 6" – 1ft. = 1,000

For every additional inch above a foot,
 add 100 more points = 1,000+

F. Dissolved Benzene – Maximum Concentration at the site (One well must be located at the Source of the release.)

 ≤ 5 ug/L = 0

 > 5 – 100 ug/L = 5

 > 100 – 1,000 ug/L = 50

X > 1,000 – 5,000 ug/L = 250

 > 5,000 – 10,000 ug/L = 500

 > 10,000 ug/L = 1,500

Fill in the blanks: (E. 0 + F. 250) = G. 250

Facility ID: 04110030County: BibbPOTENTIAL RECEPTORS

Distance from nearest contaminant plume boundary to the nearest hydraulically connected Point of Withdrawal for water supply. This distance must be field verified. If the point of withdrawal is not hydraulically connected, evidence as outlined in the CAP-A guidance document MUST be presented to substantiate this claim.

H. Public

___ Impacted = 2,000
 ___ $\leq 500'$ = 500
 ___ $> 500'$ - 1/4 mi = 25
 ___ $> 1/4$ mi - 1 mi = 10

___ > 1 mi - 2 mi = 2
 X ___ > 2 mi = 0

I. Non-Public

___ Impacted = 1,000
 ___ $\leq 100'$ = 500
 ___ $> 100'$ - 500' = 25
 ___ $> 500'$ - 1/4 mi = 5

___ $> 1/4$ mi - 1/2 mi = 2
 X ___ $> 1/2$ mi = 0

For lower susceptibility areas only:

___ > 1 mi = 0

For lower susceptibility areas only:

___ $> 1/4$ mi = 0

Note: If the site is in a lower susceptibility area do not use the shaded areas.

J. Distance from nearest contamination Plume boundary to downgradient Surface Waters OR UTILITY TRENCHES & VAULTS (Must be field-Verified)

___ Impacted = 500
 ___ $\leq 500'$ = 50
 X ___ $> 500'$ - 1,000' = 5
 ___ $> 1,000'$ = 2

K. Distance from any Free Product to basements and crawl spaces

___ Impacted = 500
 ___ $\leq 500'$ = 50
 ___ $> 500'$ - 1,000' = 5
 ___ $> 1,000'$ = 2

Fill in the blanks:

(H. 0 + I. 0 + J. 5 + K. 0) = L. 5(G. 250 x L. 5) = M. 1,250(M. 1,250 + D. 750) = N. 2,000P. SUSCEPTABILITY AREA MULTIPLIER

___ If site is located in Low Groundwater Pollution Susceptibility Area = 0.5

X ___ All other sites = 1

Q. EXPLOSION HAZARD

Have any explosive petroleum vapors, possibly originated from this release, been detected in any subsurface structure (e.g., utility trenches, basements, vaults, crawl spaces, etc.)

___ Yes = 200,000

X ___ No = 0

(N. 2,000 x P. 1) + Q. 0 = 2,000 ENVIRONMENTAL SENSITIVITY SCORE

APPENDIX V

14	Subcontract Analytical costs	Cost + 15%
15	Consumables or Rental Equipment	Cost + 15%

*Fees for legal assistance, depositions, or court appearances will be negotiated separately.

II. EQUIPMENT RENTAL

1	Organic Vapor Analyzer (OVA or FID), per day	\$100.00
2	pH and Conductivity Meter, per day	\$25.00
3	Draeger Sampler, per day	\$100.00
4	Draeger Sampler, Expenses	Cost + 15%
5	XRF, per day	\$200.00
6	Turbidity Meter, per day	\$25.00
7	Explosimeter/oxygen meter, per day	\$75.00
8	Slug Test Equipment, per day	\$35.00
9	Oil-water Interface Probe, per day	\$50.00
10	Survey Equipment, per day	\$35.00
11	Globing Positioning Satellite (GPS) equipment, per day	\$100.00
12	Permeameter, per day	\$100.00
13	Pressure Transducer, per day	\$100.00
14	Sampling Equipment (Gloves, Strings, Bailers, etc.), per well	\$15.00

III. ENVIRONMENTAL DRILLING & FIELD TESTING SERVICES, LEVEL D*

1	Mobilization of Drill Rig and Support Vehicle	
	a. Within 50-mile radius, lump sum	\$400.00
	b. Outside of 50-mile radius, per mile over 50 miles	\$3.70
2	Soil Test Borings, ASTM D 1586 *	
	a. Less than 50 blows, per linear foot, including decontamination	\$10.50
	b. Additional split spoon samples each, add	\$16.25
	c. Less than 50 blows, per foot, including decontamination	\$18.00
	d. Undisturbed Samples, ASTM D 1587, each	\$75.00
	e. Bag Samples, each	\$35.00
	f. Mud Rotary / Wash Boring Set-up, Per Hole	\$50.00
3	Well Over Drilling, per linear foot	\$10.00
4	Borehole Grouting, per linear foot	\$9.00
5	Temporary well or piezometers (1" or 2"), per linear foot, including decontamination	\$25.00
6	Monitor Well Installation, per linear foot**	
	a. 2" PVC	\$38.00
	b. 4" PVC	\$57.00
	c. Double Cased PVC (4" outside-2" inside)	\$80.00
7	Well Covers (includes lock)	
	a. Manhole Cover with 18" pad	\$150.00
	b. 4" X 4" Stick-up Cover with 3" X 3" pad	\$225.00
	c. 4" X 4" Stick-up Cover with 6" X 6" pad	\$425.00
8	Decontamination	
	a. Crew, per hour	\$150.00
	b. Steam cleaner and generator rental, per day	\$100.00
9	Containerize Soil/Water, DOT approved drums, per drum	\$75.00
10	Difficult moving, laying water line, standby, site clean-up, cover removal, etc. per hour	\$150.00
11	Backhoe or dozer rental, Miscellaneous Supplies	Cost + 15%
12	Drill crew subsistence, per day	\$200.00

* Add 25% to all services for Level C, Levels A&B quoted on individual basis. Add 25% for SPT values greater than 50 blows or depths greater than 50 feet and 60% for depths between 100 and 200 feet.

** Includes boring, SPT Sampling, 10' PVC well screen, PVC riser pipe, sand pack, bentonite seal, grout to surface, does not include well cover and lock.

IV. HEALTH & SAFETY EQUIPMENT

1	Level D - disposable coveralls, gloves, boots, etc. per staff member, per day	\$30.00
2	Level C - respiratory protection, disposable coveralls, gloves, boots, etc. per staff member, per day	\$45.00
3	Levels A or B, SCBA/Supplied Air	Quoted on Individual Basis

 (2010) Redlands, CA:
 Environmental Systems
 Research Institute
 2) Georgia Department of
 Community Affairs,
 dca.ga.gov, 2016

Tier	Job Tax Credit \$	Jobs	Use of Credits	Carry Forward
1	\$3,500 - \$4,000*	2	100% of Tax Liability Excess to Withholding Tax up to \$3,500	10 Years
2	\$2,500 - \$3,000*	10	100% of Tax Liability	10 Years
3	\$1,250 - \$1,750*	15	50% of Tax Liability	10 Years
4	\$750 - \$1,250*	25	50% of Tax Liability	10 Years

In the table immediately above, the () denotes the inclusion of the \$500 bonus for counties that are members of a Joint Development Authority (JDA). This addition of the \$500 bonus creates the maximum Job Tax Credit amount which can be awarded to a business.*
